

OVI-PLANTER™

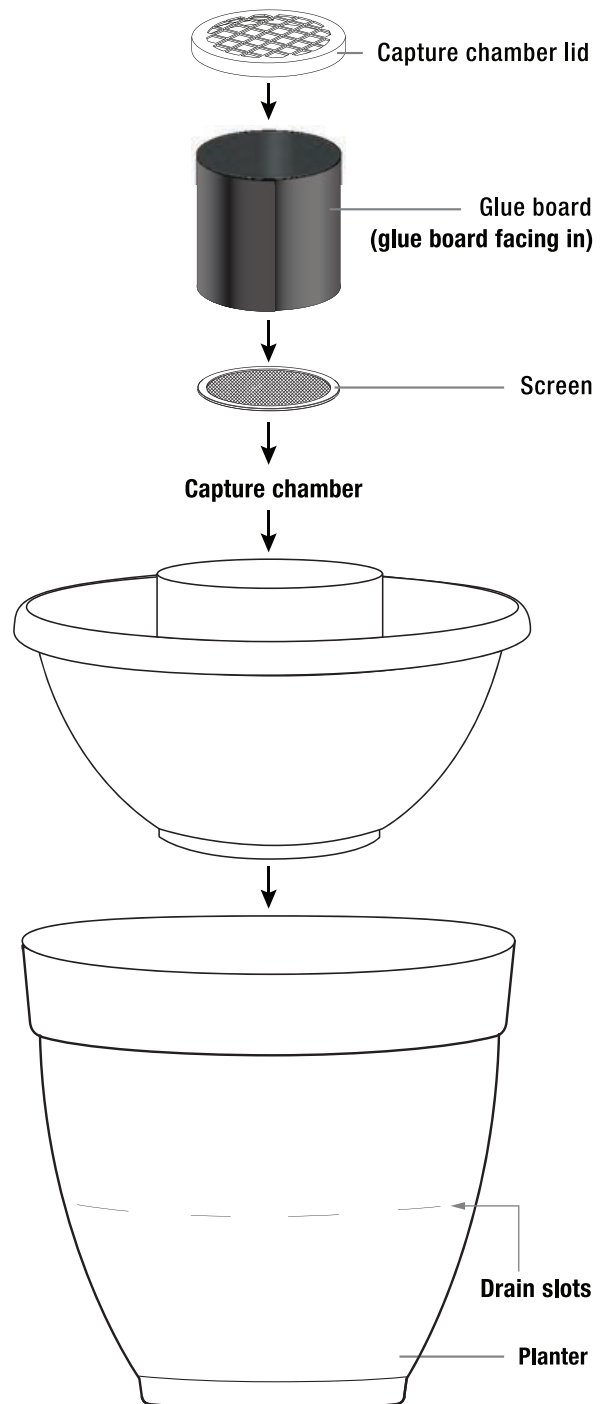

AGO Mosquito Trap

DIRECTIONS:

- (1) Place the screen disk in the bottom of the capture chamber.
- (2) Peel protective white release paper from board to expose adhesive catch surface. Dispose of release paper in household trash. Carefully form a cylinder with the black adhesive-coated board and slide it into the capture chamber with the adhesive side facing in. Install the capture chamber lid.
- (3) Fill the planter with water 1-2 inches below the drain slots. Add a small handful of locally sourced organic material like leaves, grass, hay.... The decomposing organic material will aid mosquito attraction.
- (4) Once the lower planter is filled to the proper level and the organic material is added install Ovi-Planter upper bowl on to the lower planter and place in desired location.

Best practices:

- Place Ovi-Planter in places on a property that are cool, moist, shaded and out-of-the-wind, this is where mosquitoes are on a property.
- 2-4 Ovi-Planter traps should be placed on an average sized property.
- If possible, prepare the mixture of water plus organic material a few days in advance. This will allow the smell to build and be more effective when first placed.
